Real-Time Virtual Support Pathways

For rural health providers, friendly clinical help is just a click or call away.

Real-Time Virtual Support (RTVS) pathways are here to help for all urgent and non-urgent situations — including case consultations, second opinions and ongoing patient support, patient transport coordination, point-of-care ultrasound, and simulations. All you need is a Zoom licence, or telephone line.

Family arrives at rural ER with one-month-old baby in cardiac arrest

“ Within 10 minutes of arrival to the ER, I was able to connect with one of the pediatricians through CHARLIE. I was able to put him up on the screen.

You just had to be there to see the calm that came into the room when his face showed up on the screen. He then graciously and supportively guided us through the resuscitation of the babe until the patient was stable.
