# DISCLOSURES

## Planning Team

- **Dr. Bob Bluman (UBC CPD):** No conflicts of interest
- **Kathryn Young (UBC CPD):** No conflicts of interest
- **Caldon Saunders (UBC CPD):** No conflicts of interest

## Panelists

- **Krishana Sankar:** No conflicts of interest
- **Timothy Caulfield:** Has received funding from CIHR, Stem Cell Network, Genome Canada, Canadian Cancer Society, Canadian Biomedical Research Fund (gov. of Canada) for peer reviewed research grants (held by University of Alberta) to support research and engagement activities. Is a member of Speaker's Spotlight bureau, a speaker agency that organizes talks. Financial relationships are **unrelated** to this webinar.
- **Thomas Piggott:** Has received funding from Multiple Sclerosis International Federation in research funding, Public Health Agency of Canada to support the development of the Canadian Post-COVID Condition guidelines, and World Health Organization to support operations/staffing to evaluate improvement in transparency of the Essential Medicine List. Financial relationships are **unrelated** to this webinar.

# DISCLOSURES

## Panelists continued

- **Cheryl Peters:** Expert group on occupational cancer burden in the Netherlands (TNO University). Compensated by TNO University for time for role on expert group. This role is **unrelated** to work in this webinar; Member of advisory board for Evict Radon National Study. Does not receive payment for this role. Role is **unrelated** to the content of this webinar. Received funding from Canadian Institutes of Health Research Social Sciences and Humanities Research Council, Canadian Cancer Society, WorkSafeBC Workers' Compensation Board of Manitoba, Provincial Health Services Association, Canadian Partnership Against Cancer Government of Alberta (Alberta Health). All of these organizations have funded (or currently fund) research project grants held on topics related primarily to occupational and environmental disease prevention. The SSHRC funding was for a project on cancer myths, and the CCS funding is for a current grant on cancer prevention misinformation, which are relevant topics to the topic. **Neither SSHRC nor CCS have any influence** on the research design nor dissemination of any results of those studies.
- **Marco Zenone:** Has received direct financial payments from Health Law Institute, University of Alberta where employed as a research associate. Received funding for CIHR, Canadian Cancer Society where listed as a trainee or collaborator on several grants under the organizations. Received postdoctoral funding from CIHR (Banting; starting Sep 2024). Financial relationships are **unrelated** to this webinar.
- **Bruce Hobson:** Received payment from UBC CPD, Doctors of BC, PainBC, Health Excellence Canada, PHSA, Cowichan Divisions of Family Practice, Health Data Coalition for roles as Medical Director, Medical Lead, Committee Member. These roles have **no influence on program or content**.

## Abstract

There is limited available information on patterns of utilization and efficacy of alternative medicine (AM) for patients with cancer. We identified 281 patients with nonmetastatic breast, prostate, lung, or colorectal cancer who chose AM, administered as sole anticancer treatment among patients who did not receive conventional cancer treatment (CCT), defined as chemotherapy, radiotherapy, surgery, and/or hormone therapy. Independent covariates on multivariable logistic regression associated with increased likelihood of AM use included breast or lung cancer, higher socioeconomic status, Intermountain West or Pacific location, stage II or III disease, and low comorbidity score. Following 2:1 matching (CCT = 560 patients and AM = 280 patients) on Cox proportional hazards regression, AM use was independently associated with greater risk of death compared with CCT overall (hazard ratio [HR] = 2.50, 95% confidence interval [CI] = 1.88 to 3.27) and in subgroups with breast (HR = 5.68, 95% CI = 3.22 to 10.04), lung (HR = 2.17, 95% CI = 1.42 to 3.32), and colorectal cancer (HR = 4.57, 95% CI = 1.66 to 12.61). Although rare, AM utilization for curable cancer without any CCT is associated with greater risk of death.

False hope

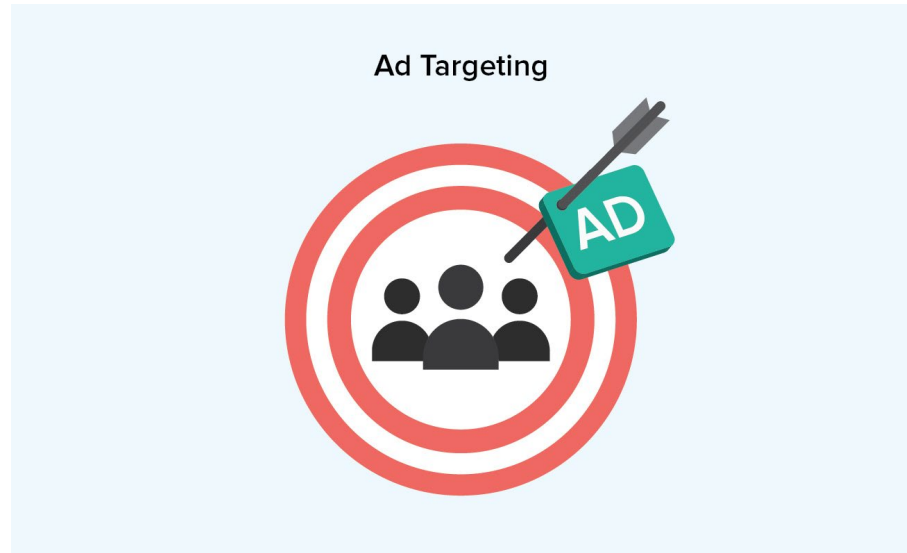

Time away from loved one's at end of life

Harm from alt. treatments

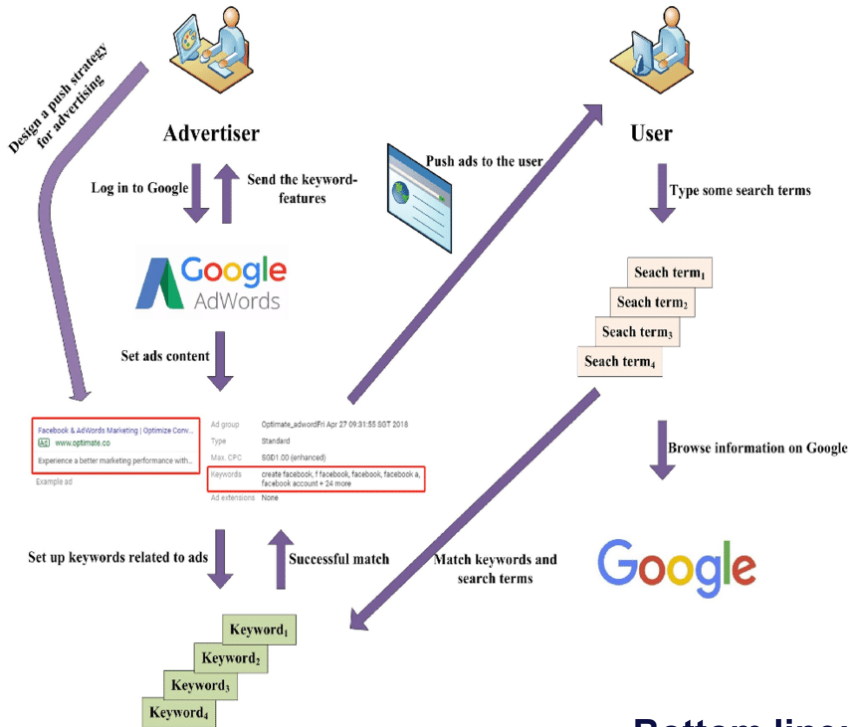

Financial exploitation

Opting out of conventional treatment

Delaying or denying end of life planning
